TOOLS & TIPS

Air Inflator (sold separately)

Our High Power Inflator (#35057) is the perfect solution for your inflation needs.

Inflates balloons in seconds!

1. Make sure you have the necessary parts and tools before beginning. *NOTE: Requires one 17" Balloon Gizmo™ balloon (sold separately).*
2. BEFORE INFLATING THE BALLOON, insert the **Standard Connector Clip (B)** into the pocket located on the bottom of the **Balloon Gizmo™ Balloon (A)**.
3. Fold the balloon flaps over the connector clip to secure it in place (photo 1).
4. Attach **Standard Rod (C)** to the balloon by aligning the square slots on the cup end of the rod with the teeth on the connector clip. Push pieces together until they click (photo 2).
5. Inflate balloon until the surface is smooth and wrinkle free. *NOTE: Slightly under-inflate in hot climates to allow space for air to expand.*
6. Roll car window down. Slide **Window Bracket (D)** over the lip of window (photo 3). *NOTE: Place bracket on rear half of the window for optimum fit.*
7. Roll up window. The bracket is designed to allow the car window to completely seal against inclement weather.
8. Attach the assembled balloon & rod to the window bracket by aligning the locking peg on the rod with the slotted hole on the bracket. Slide the post into the bracket and twist the rod a ¼ turn counter-clockwise to lock in place (photo 4).
