

O' CHRISTMAS TREE

QTY	ITEM	DESCRIPTION
1	90929	Std. Satin Luxe™ Jade Star
1	11228	11" Pearl White Latex (28-35 needed)
1	16228	16" Pearl White Latex (16-20 needed)
1	-	7" Chrome Latex (42 needed)
1	18200	260 Chrome Twisteers (8-10 needed)
1	18249	260 Pearl White Twisteers (51-53 needed)
1	3708	50 lb Clear Monofilament
1	720982	Balloon Shine™

Balloon Cluster Method

Air inflate two latex balloons and tie together to make a duplet. Make another duplet. Twist the two duplets together to make a cluster. *Option: Tie in a fifth balloon into your four-balloon cluster to build a wider based tree.*

Using the method above, make 11 clusters. Inflate the largest cluster to 15" and reduce the size of each additional cluster by one inch as you go. The uppermost cluster will be 5".

Assembling the Tree

Lay the 15" cluster on the ground and tie monofilament to the necks at the center of the cluster.

Place the 14" cluster on top of the 15" cluster and nest them together. Wrap the line around the new cluster and the one right below keeping the balloons tightly nested.

Repeat the step above using the next smaller cluster until all of the clusters have been added to the tree. Tie and cut off any excess line.

Adding the Star

Air inflate the star. Tie an uninflated 260 to the neck. Nest the star into the top cluster and wrap the 260 around the cluster to secure it to the tree.

Adding Ornaments

Air inflate 7" Chrome latex to 3", 4" and 5". Tie an uninflated 260 to each balloon. Place the balloon in the desired location and wrap the uninflated 260 around the cluster of the tree to hold the ornament in place.

Adding 260 Curls

Fully air inflate a 260, then release all the air. Wrap the 260 around a cylindrical object (like a wrapping paper roll). Secure the tip of the 260 to the top of the cylinder using a clip (a Clip-N-Weight® works great for this). The tighter the balloon is wrapped, the tighter the spiral will be. Fully air inflate the 260, slip it off the cylinder and tie. Tie an uninflated 260 to the neck of each curl. Place each curl in the desired location and wrap the uninflated 260 around the center of the cluster to hold them in place.
